

CASE STUDY

Frozen Pipe Break

LOCATION

Luxurious home in Lake County, IL

PROBLEM IDENTIFIED

During a freezing January week while the owners were at their second home, a water pipe break caused the basement to flood with more than 4 feet of water.

It caused \$150,000 in damage to furnishings and destroyed the furnace and water heater.

SOLUTION

As part of remediation, the insurance company demanded remotely monitored leak detection for homeowners to retain their insurance policy.

The contractor installed RSC-900-Wi-Fi for remote monitoring.
